

PRESS RELEASE

Retelit and Italtel bring AI to workplace safety: an intelligent platform for factories and construction sites is born

Milan, February 25, 2026 - Retelit, one of Italy's leading operators in the Telco & ICT sector focused on the B2B market, and Italtel, a leading Italian multinational company in advanced technology solutions, present "Cosafety AI," an artificial intelligence platform that supports companies in strengthening workplace accident prevention processes.

In the first ten months of 2025, INAIL data indicate that there were 896 fatalities at work in Italy, while the number of accidents continues to rise. This situation makes it increasingly urgent to introduce new tools capable of enhancing workplace safety, combining traditional solutions with innovative, economically sustainable technologies based on artificial intelligence.

Cosafety AI, born from the combination of **video analysis software based on artificial intelligence developed by Italtel and Retelit's cloud**, which represents its **supporting infrastructure**, offers companies an innovative tool that transforms existing video surveillance systems into active prevention tools, contributing in a concrete way to greater protection for people at work.

Thanks to machine learning algorithms developed by Italtel engineers with advanced technological know-how, the solution is able to analyze video streams in real time, identifying the most common risk situations in industrial settings, such as unauthorized access, dangerous behavior, lack of protective equipment, and people standing still in unnatural positions. All this is reported via real-time alerts and intuitive dashboards, allowing for quick and targeted intervention.

Designed to run on Retelit's cloud, the entire platform is hosted in Retelit's Italian data centers, ensuring high standards of reliability and **data sovereignty**, an increasingly important issue for companies.

"Thanks to our collaboration with Italtel, we are bringing artificial intelligence from the cloud to the operational field, transforming it into a concrete tool for preventing accidents at work and protecting workers' health," said Mimmo Zappi, Chief Commercial Officer of Retelit. "Our cloud and data center infrastructures not only host new technologies and applications, ensuring the sovereignty of corporate data, but also enable their adoption by companies in every sector, with concrete benefits for workplace safety and for the Country".

"Italtel confirms its position as the partner of choice for large companies seeking technological solutions. We offer concrete solutions that integrate advanced technologies and software made in Italy, developed by our Competence Center, with a clear objective: to improve service quality," said Fabrizio La Paglia, Head of Telco & Media Business Unit at Italtel. "Thanks to integration with Retelit's cloud, our intelligent analysis technology becomes a reliable, ready-to-use platform capable of supporting the safety of people, environments, and infrastructure in industrial settings, transforming video surveillance into an intelligent tool for protecting people and safety in the workplace."

Cosafety AI is a concrete proof of Retelit and Italtel's commitment to offering advanced digital solutions. By integrating artificial intelligence, networks, and data platforms, the solution helps make workplaces safer and more efficient, transforming prevention into a true element of innovation and operational value.

Italtel

Italtel is a multinational company operating in the Information & Communication Technology sector with a strong focus on innovation. Italtel offers digital transformation solutions that include networks, data centers, digital workspaces, security, hybrid cloud, and the Internet of Things. The solutions consist of both proprietary and third-party software products, managed services, engineering and consulting services, analytics, and automation. The target market consists of public and private companies, with a specific focus on the vertical markets of Telco, Media & Entertainment, Public Administration, Banking and Insurance, Utilities, Transportation, Healthcare, and Manufacturing. Retelit

Retelit is one of Italy's leading telecommunications companies, focused on the B2B market, with an offering that integrates infrastructure and digital solutions and comprehensive coverage across Italy. With over 25 years of history and strong vertical expertise, enabled in part by an ecosystem of strategic partners, Retelit supports businesses, public administrations, telco operators, and OTTs that want to tackle the challenges of innovation. Retelit offers a complete range of ICT services, from fiber optics to data centers, from cloud to cybersecurity to managed services. The combination of Retelit's proprietary assets (an extensive fiber optic network in Italy and worldwide, a network of data centers distributed nationwide, and international submarine cables) and its expertise in innovation and digital technology has created a unique player in Italy capable of supporting customers in their digital transformation journey. Retelit is in a phase of growth and expansion of its expertise and strategic assets. With the establishment of Retelit-X, which incorporates BT's Italian activities and assets, Retelit is significantly enhancing its fiber optic network by an additional 11,500 km, for a total network extension of over 47,500 km, and expanding its national data center infrastructure with four additional data centers between Milan and Rome. Retelit has also signed an important agreement - together with the Minister of Economy and Finance in Italy - for the acquisition of Sparkle, the main wholesale international telecommunication services provider in Italy and a key player in submarine cables. Retelit is controlled by Asterion Industrial Partners. For more info: visit retelit.it.
